Notes on Cost Estimates

Cost models are developed by SMC, an independent construction management form familiar with the buildings and library renovation. The estimates are opinions of probable costs based on 3rd quarter 2022 cost for north suburban Chicago.

^{*} Project costs

Northfield Cost Comparisons

> Any of the outlined options are less expensive than building a similar size building. Land acquisition and/or lease costs are excluded from all options.

Costs include demolition, new construction, general conditions, general requirements, bonds and insurance, contractors fee, design and construction contingencies and escalation of 10% per year and anticipates 6 months of design and 1 year of construction. The project team has added professional fees, furniture, fixtures and equipment, and relocation costs. Key exclusions include deep foundations, land acquisition, collection development and other soft costs such as legal, accounting or real estate services.

Each model is an opinion of probable cost. Many decisions regarding material selection, system development and project parameters have yet to be defined. Market conditions, as always, are beyond the control of the architect or estimator and will vary over time. No guarantee is given or implied that costs will not vary from these models. It is imperative that additional estimates are prepared as the project is developed to ensure conformance with project budgets.
